

These are uncertain times, but we are here to help you navigate the needs of your critical facilities assets and are prepared to adapt to the changing requirements of your locations.

As your trusted service provider, EMCOR Facilities Services can provide cleaning and maintenance solutions to help mitigate the impact the current public health crisis is having on your business, facilities, and operations.

For locations that are seeing a larger influx of people—such as pharmacies or retail/grocery stores—we can provide increased cleaning frequencies to both *curb the spread of germs and help protect the facilities' employees and visitors.*

For multi-site facilities that have significantly reduced their occupancy or are completely unoccupied, we can perform full site assessments and adjust building systems in order to help increase efficiency and promote site security and safety.

For locations seeing higher traffic, we offer:

- » Increased cleaning frequencies
- » Hand sanitizer stations and disinfectant wipe stations
- » Enhanced cleaning methods for high-touch areas, such as switching to EPA-registered disinfectants vs. all-purpose cleaners
- » Signage and communications alerting occupants and visitors about cleaning practices and frequencies
- » Cashier “sneeze guard” installations
- » Increased frequency of porter service

For locations that are either closed or have reduced occupancy, we can:

- » Assess and adjust HVAC systems (operating schedules and set-points)
- » Dispose of waste, food, and other perishables
- » Assess and adjust interior & exterior lighting schedules
- » Identify potential unnecessary water consumption
- » Verify security of site by locking doors, closing windows, etc.
